

Symphonia Astrologica® Help

About Symphonia Astrologica

Symphonia Astrologica® is a programming suite that includes the programs:

1. Themes®.
2. Themes Database®,
3. Places Database®,
4. Symphonia Astrologica® Help

Themes® – Brief description

It is a program that builds astrological birth themes according to the Placidus method¹ and makes several types of progressions on this theme: primary directions, secondary directions, annual or solar themes, monthly or lunar themes and daily themes. In addition, it also builds themes for each moment (current themes), which may be relevant in the context of Horary Astrology. For each type of progression, the user can choose between two views: progression theme and aspect table between the progressed planets or progression theme and birth theme. In either case, you can view a chronology of aspects. For each astrological theme, it is also possible to compare it with the current positions of the planets and, thus, determine the transits, which can be important for the forecast of events. Themes® can create a file system of astrological themes on the user's computer and create a database. Each astrological theme can be printed in .pdf format or on paper, existing two different print formats.

Themes® is a customizable program. The user can edit the colours of the astrological circle, aspect grid, background, astrological symbols, and aspect orbs.

Themes Database® – Brief description

This program manages the astrological themes on the computer. The themes can be filtered according to their type (birth themes, primary directions, etc.) or according to the activity of each of the natives. This allows the database to be consulted according to several criteria, facilitating astrological research. For example, the user can relate the activity of each person to a certain type of position or aspect.

¹ The Placidus method does not allow to create themes for latitudes above the Arctic Circle or below the Antarctic Circle. This possibility will soon be available using the Campanus method.

Places Database® – Brief description

This program constitutes a database of places on Earth. Initially, the database includes the geographical coordinates of approximately 75000 places. Updates to this database are planned, increasing the number of locations. The user can add and delete locations, updating the database.

Symphonia Astrologica® Help – Brief description

The Help consists of a set of documents, which are divided into 2 groups:

1. “How to ...?”, which indicates how to carry out the various actions allowed by the different programs.
2. A glossary of astronomical and astrological terms.

Each document can be viewed in .doc, .pdf or .htm format.

Symphonia Astrológica is available in 5 languages: English, Portuguese, Spanish, French and German.

The eBook “Principles and Laws of Astrology” is also included, aimed both at students who have begun studying this discipline and at professionals seeking to deepen and systematize astrological concepts.
